OUTPUT :

When object is not near to the ultrasonic sensor

The screenshot shows the Wokwi IoT simulator interface. On the left is the code editor with the following code:

```

1 #include <Wifi.h> //library for wifi
2 #include <PubSubClient.h> //library for MQTT
3

31 int trig = 5;
32 int echo = 18;

On the right is the simulation window showing a circuit diagram of an ESP32 microcontroller connected to an HC-SR04 ultrasonic sensor and an LED. The sensor's VCC is connected to the ESP32's 5V pin, GND to GND, TRIG to pin 5, and ECHO to pin 18. The LED is connected to pin 4. The simulation status bar shows a timer at 00:05.682 and 99% battery.

The output console shows the following log messages:

```

Sending payload: {"distance":403.45,"object":"No"}
Publish ok
Distancein cm233.00

Sending payload: {"distance":233.00,"object":"No"}
